Abstract

Many student face problem while searching for online resources which are available free but does not use these free online resources. There are millions of student which are using online platform like education, video editing, Gym, movies site and so on for this purpose but does not use properly and they face many issue related to website like many website are paid .

So, we made this website, in this website we linked all free resources in this website(Web-dent).Web-dent site interface is very simple and easy to use. We selected approx. 13 categories site like profile photo maker, Learning platform, Gym, pdf editor tools online, stock images, premium courses , Cracked Software, books pdf download, coupons and deals, and so on.

I.   Introduction

Many useful websites are present in the internet which are unknown to everyone. For students they don't know the websites which are useful to them in their academics, career ,etc. So we made a website with the main categories, which helps the students.

I.1 Background and context

With the increasing usage of internet many students uses premium websites but these premium websites have alternatives and many students cannot afford these premium websites.

There are more than 70% of students who cannot access these premium websites to make their daily life comfortable. Due to this students face problems in their academics or in their career.

To overcome this problem , we made a useful website to the students.

I.2 Scope and objective

The objective of our project is to spread the useful websites which make the students daily life comfortable and make them available to everyone to avoid the usage of premium websites which have costly subscription.

I.3 Achievements

We have successfully made a website using HTML. We have made it look attractive using CSS. We were successful in hosting a website and making it live using netlify. We have linked the important web pages to our website. We have added 13 main categories of websites at present and we are thinking to add many other categories to this website. . We were able to make our website responsive using the bootstrap module of CSS and little animations to look more attractive.

II. Formulation of the problem

II.1 Problem Statement

The websites which are useful to everyone in their daily needs are not much known to everyone , instead of this people use the premium websites which are costly. There are many open source web applications which are free for everyone but there are not much known to anyone because of these premium websites.

II.2 Methodology

The proposed solution is to create a list of open source web applications and make them in to a simple website as a collection of websites under the categories.

Today's era is an Internet Technology era. We have created a simple website which has a wide collection of websites and classified them into their sub categories.

II.3 Website Creation

We have added the relevant information into the website. The website has been made using the HTML and CSS frameworks.

The website contains two different pages namely home and categories. These pages have been linked to each other using href tag of HTML. The bootstrap module of CSSis used to make the website responsive. The different sections of website are:

i.   **Home**

The home section contains an introductory image and a tag line. When we scroll down we have categories button , by clicking on it we can go in to the 2nd page and   by scrolling a little down we have mentioned or motto i.e "utilize from it , learn from it , grow from it ". after again little scrolling you will find the benefits of our website and also mentioned the functioning of Web-Dent website . At last of the home page we mentioned or contact details of our LinkedIn account.

ii.   Categories

The categories is the 2nd html page which contains the categories of websites with their name s and links. We had added only 13 main websites which are extremely helpfully to people while doing their everyday work

II.4 Results
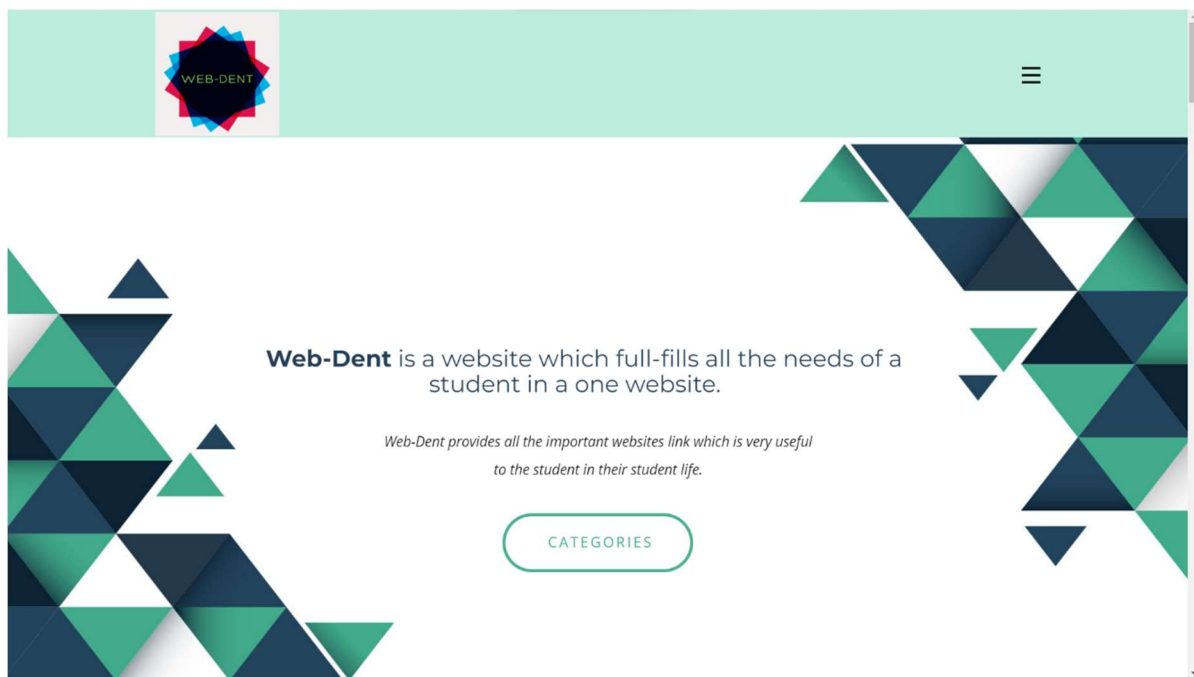

The link of the website is web-dent-team-alpha.netlify.app

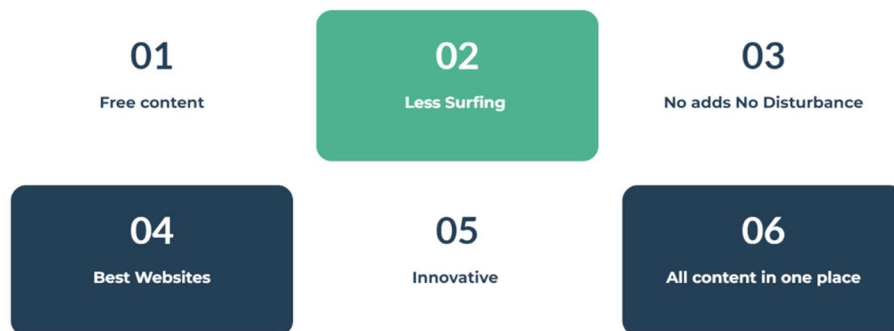

Figure 2: Our website Motto

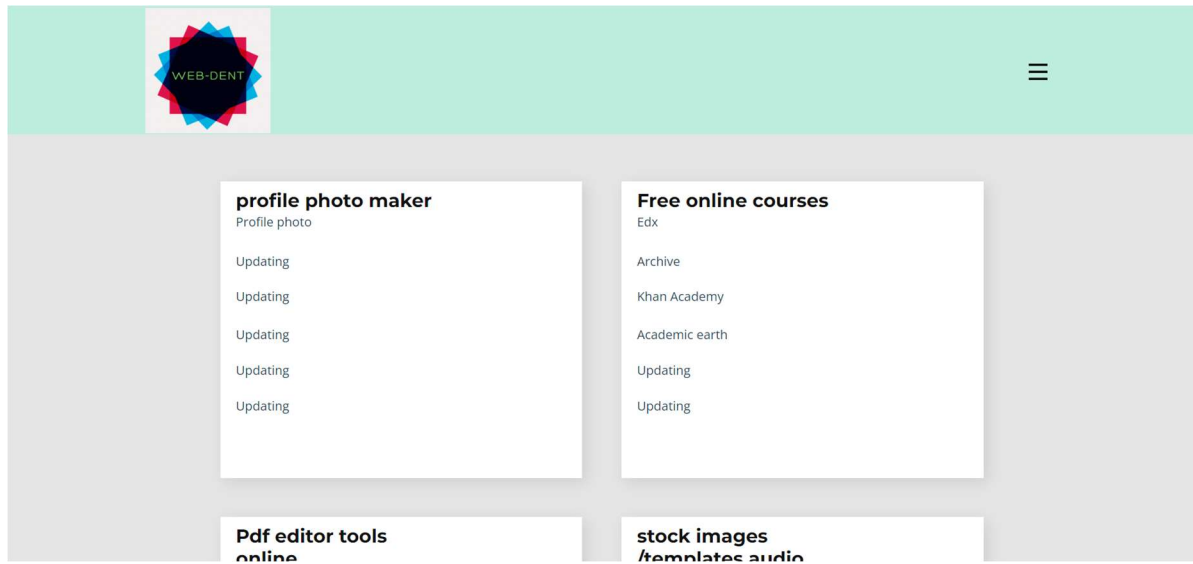

Figure 3: Benefits of using our website

Figure 4: Important Categories

III. Conclusion and future work

The amount of knowledge and experience that we got through this project was immense .We are regularly plan to update this website and make it simple and easier to use. We were able to host the website in few days. If our website could help in student's life, our motive will be completed. Now we have a dedicated platform where there is all the information regarding the rules and regulations to be followed , the preventive measures and the do's and don'ts to be followed.

In future we plan add more feature in this website. We increase more content and add more category. We expand this website world wide
